

## CLOVE HITCH NO. 2

When it is necessary to form a clove hitch around a spar which is closed at both ends or around a pole too high to toss over, we use this method. Make a simple turn around the bar, across the rope over and tuck it as shown. Fig. D shows the completed knot.

## SLIPPERY CLOVE HITCH

This can be tied in either of the two methods shown previously, the only difference being that a bight is formed and passed back through the last turn. This allows the clove hitch to be quickly untied.
