

# Helicopter

## You need:

- Stiff paper or thin cardboard (a file card is good)
- A cork
- A rounded toothpick, or a 3.75 cm (1 1/2 inch) nail, or a burned wooden match
- Scissors
- Tape

## How to make it:

1. Cut the paper or cardboard to look like this.
2. Tape the toothpick, nail, or match to the shape.
3. Bend your shape like this.
4. Push the stick into the cork. If you are using a wooden match, push very carefully so that it won't break. Try making a hole, smaller than your stick, in the cork first.
5. Take your helicopter outside and throw it into the air. You can even do it inside if the room is big enough and you are sure that you won't break anything.

*This is what happened when I threw my helicopter into the air:*
